

EVERYWHERE
ALWAYS CONNECTED

Global Team Communications

We provide global communication solutions to enable corporate and government entities to connect and protect their **most important asset, their people.**

Secure, Encrypted Messaging
Location Monitoring & Messaging
Global Incident Command System

WHY EVERYWHERE COMMUNICATIONS?

Powered by patented technology deployed in mission-critical environments for over 15 years, EVERYWHERE delivers purpose-built software solutions for enterprise and government organizations with teams requiring connectivity in and out of cellular coverage. Led by a team that has deployed \$2B in connected and IoT services, we created the path to interoperable connectivity - EVERYWHERE.

WHY EVERYWHERE COMMUNICATIONS?

Powered by patented technology deployed in mission-critical environments for over 15 years, EVERYWHERE delivers purpose-built software solutions for enterprise and government organizations with teams requiring connectivity in and out of cellular coverage. Led by a team that has deployed \$2B in connected and IoT services, we created the path to interoperable connectivity - EVERYWHERE.

EVERYWHERE PRODUCTS

Our product portfolio includes an innovative smartphone app, a rugged Garmin inReach® satellite communicator on the Iridium® satellite network, and a state-of-the-art management hub. Together they create the EVERYWHERE Always Connected™ Platform, enabling organizations to manage all assets on a single pane of glass.

EVERYWHERE APP

Purpose-built for enterprise and government organizations with employees working in or out of cellular coverage. The EVERYWHERE App operates independently on Wi-Fi, cellular networks, or globally when Bluetooth paired to a Garmin inReach satellite device on the Iridium satellite network.

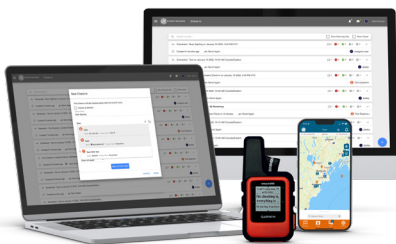

EVERYWHERE SATELLITE DEVICES BY GARMIN

The rugged EVERYWHERE Secure inReach Mini 2, Messenger, GPSMAP 67i, Montana 700i and Montana 750i are small satellite communicators; when combined with purpose-built enterprise software by EVERYWHERE, organizations can monitor and communicate with their teams deployed around the globe.

EVERYWHERE IRIDIUM EDGE SOLAR

The EVERYWHERE Iridium Edge Solar is a slap-and-track, standalone, programmable, solar-powered Short Burst Data® device that offers real-time GPS tracking and local wireless sensor and communication capabilities over Bluetooth.

EVERYWHERE HUB

A comprehensive web-based solution for monitoring and managing workers and assets. The hub provides situational awareness and asset tracking by consolidating position, status, and message information and enabling two-way data communication with assets in the field.

Hub operators can create geofences surrounding key areas to manage personnel and assets. Entry and exit notifications for field users are customizable between various geofences, which can be stacked, overlapped, and turned on and off as needed.

Multi-channel notifications are customizable to ensure alerts are routed to appropriate stakeholders, team members, or an emergency response coordination center.

Check-ins can be automated by geolocation, schedule, team, or remotely activated by the user in the field.
